TMT Deliverable 1

TMT Industry Overview

The technology, media, and telecommunications (TMT) sector continues to demonstrate rapid growth in 2024. In the past five years, TMT companies have achieved \$15 trillion in value creation. Over 50% of the value created within TMT, at almost \$8 trillion came from just six key industry players: Alphabet, Amazon, Apple, Meta, Microsoft, and Nvidia.

TMT Trend: AI

In recent years TMT companies have deployed AI technologies at an accelerated pace. AI supports growth for the companies creating the tools, and for chip-manufactures as AI relies on chips for processor power. TMT companies are also implementing AI internally to optimize operations for cost savings.

TMT Challenge: Cybersecurity

In the constantly changing landscape of TMT, a critical concern for companies is upholding cyber security standards. This industry deals with vast amounts of user and company data, vulnerable to data breaches. To hold the trust of customers, TMT companies must protect against threats.

Technology Sector and Salesforce

Within the technology sector of TMT, software has generated the most value of the tech subsectors at \$4.9 trillion over the past five years. One of the top five value creators in software is Salesforce. Salesforce specializes in customer relationship management solutions for businesses and is staying competitive with the release of AI technologies; they announced their new product “Agentforce” in mid-September. In the past, Salesforce has done well avoiding cybersecurity issues but is precautionary with new enhancements to security measures for its platform “Data Cloud”. Salesforce must have proper security for Data Cloud as this platform integrates with all other parts of Salesforce. Salesforce has also recently improved its support for unstructured data, enhanced search capabilities, and established real-time data updates within Data Cloud. These changes make Salesforce a stronger competitor against giants like Microsoft, Oracle, and AWS.
