

How Vetra Works At a Glance

Vetra simplifies freight planning with AI-powered load matching, personalized recommendations, and real-time analytics. Whether you're a carrier, dispatcher, or fleet, Vetra helps you:

- Plan smarter routes and fill backhauls instantly
- Get load suggestions tailored to your history and preferences
- Access private performance insights to boost profitability
- Save time with favorites, saved searches, and dispatcher tools for managing multiple trucks

Fewer empty miles. Smarter decisions. Higher revenue.

Vetra Technologies is a logistics intelligence platform that empowers carriers, dispatchers, and corporate fleets to eliminate inefficiency, monetize empty miles, and drive smarter freight movement across the country. Vetra enables carriers to increase revenue by up to \$68,000 per truck annually.

VETRA

TECHNOLOGIES

MAKE EVERY MILE COUNT

Vetra Technologies is a Smart Load Planning Platform

Every trucking company, no matter its size, should have the ability to operate like a major player. The features we offer work together to maximize your revenue and efficiency.

Optimal Trip Building

Build complete trips in seconds with smart route options ranked by revenue, distance, and efficiency with 1-leg, 2-leg, and multi-leg trip options.

Private Sight Analytics

Get powerful fleet insights built only for you — private, secure, and exclusive.

Adaptive Load Suggestions

Vetra learns your history to suggest the loads, lanes, and rates you prefer.

Productivity Workflow Tools

Save searches, bookmark loads, and manage trucks from one streamlined dashboard.

Who Vetra Helps

Trucking Companies

Reduce deadhead, boost utilization, and scale profitability with AI-driven load matching.

Dispatchers

Manage everything in one intelligent hub: book faster, assign smarter routes, and cut platform switching.

Owner-Operators

Find better loads, avoid empty miles, and take control of your business with predictive tools.

Truckers

Stay moving, earn more, and cut wasted time through smarter routing and efficient load matching.
